Covid-19 Vaccine

Adverse Event Dashboard

Zoe Liao 3/23/22

Vaccine Adverse Event Reporting System

Self-Reported Data

Passive surveillance system monitored by CDC and FDA

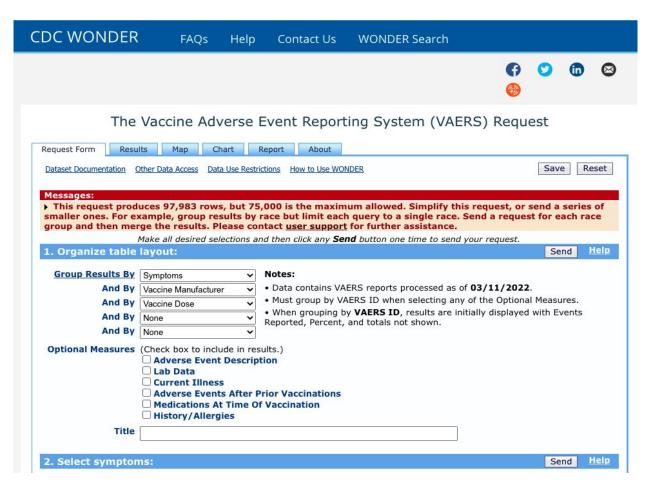

3 Tables per Year

Event data, Vaccine data, Symptom data (joined by VAERS_ID)

- Patient information (age, date of birth, sex)
- Vaccine information (brand name, dosage)
- Date, time, and location administered
- Date and time when adverse event(s) started
- Symptoms and outcome of the adverse event(s)
- Medical tests and laboratory results (if applicable)
- Physician's contact information (if applicable)

Tried using CDC Wonder...

GOAL

- Pipeline for interactive dashboard
- Visualize adverse events reported for Covid-19 vaccines
- Conveniently updated

PIPELINE

- CSV files
- 2020, 2021, 2022

3 tables: patient data, vaccine, symptoms

- Query Covid-19 vaccine data
- Clean, aggregate for visualization

- Unit tests for processing
- Update dashboard after downloading new data

https://covid-vax-vaers.herokuapp.com/

INSIGHTS

- Most adverse events reported for Dose 1: Moderna
- Most adverse events reported for Dose 2: Pfizer
- Most frequently administered location: "Private" (vs Pharmacy, Nursing Home, Work, etc.)
- Similar top frequency symptoms for 1st dose:
 - Pfizer: 1) headache, 2) pyrexia (fever), 3) pain
 - Moderna: 1) headache, 2) pain, 3) pyrexia
 - Janssen: 1) headache, 2) pyrexia, 3) pain

Caveats: don't know in proportion to how many people received, severity of symptoms, unverified data, symptoms from free text extracted by VAERS
